5	Services	<ul style="list-style-type: none"> <li>➤ Provided services</li> </ul>

		loading and unloading. ➤ "Monday to Thursday - from 00:00 to 24:00 hours ➤ Friday - from 00:00 to 22:00 hours ➤ Sunday - from 22:00 to 24:00 hours"
6	Charging	Not for public disclosure

### Technical Parameters

#### Tracks & Lengths

Tracks	length of tracks (m)	Electrified	Interlocking
Track 1	679	YES	Remotely Controlled
Track 2	613	YES	Remotely Controlled
Track 3	577	YES	Remotely Controlled
Track 4	510	YES	Remotely Controlled
Track 5	452	YES	Remotely Controlled
Track 6	571	YES	Remotely Controlled
Track 7	499	YES	Remotely Controlled
Track 8	460	YES	Remotely Controlled
Track 9	537	YES	Remotely Controlled
Track 10	520	YES	Remotely Controlled
Track 11	503	YES	Remotely Controlled
Track 12	468	YES	Remotely Controlled
Track 13	474	YES	Remotely Controlled
Track 14	421	YES	Remotely Controlled
Track 15	420	YES	Remotely Controlled
Track 16 (Playa de Tracks)	354	NO	Remotely Controlled
Track 17 (Playa de Tracks)	204	NO	Remotely Controlled
Branch 8 (PMA)	222	NO	Remotely Controlled
Branch 9 (PMA)	177	NO	Manual
Branch 11 (PMA)	142	NO	Manual

#### Services and Timetables

Shunting by manpower	Monday to Thursday - from 00:00 to 24:00 hours Friday - from 00:00 to 22:00 hours Sunday - from 22:00 to 24:00 hours
Load / unload wagons	
Reception / expedition of trains	

#### Storing capacity

**m2**

Rail Yard	15000
-----------	-------

#### Motor Equipment

**Power (hp)**

Locomotive N° 1	315 hp
Locomotive N° 2	276 hp
Locomotive N° 3	310 hp

#### Ramps Loading/ Unloading Vehicle

**Length (m)**

Branch 8 (PMA)	222
Branch 9 (PMA)	177
Branch 11 (PMA)	142

**Stackers**

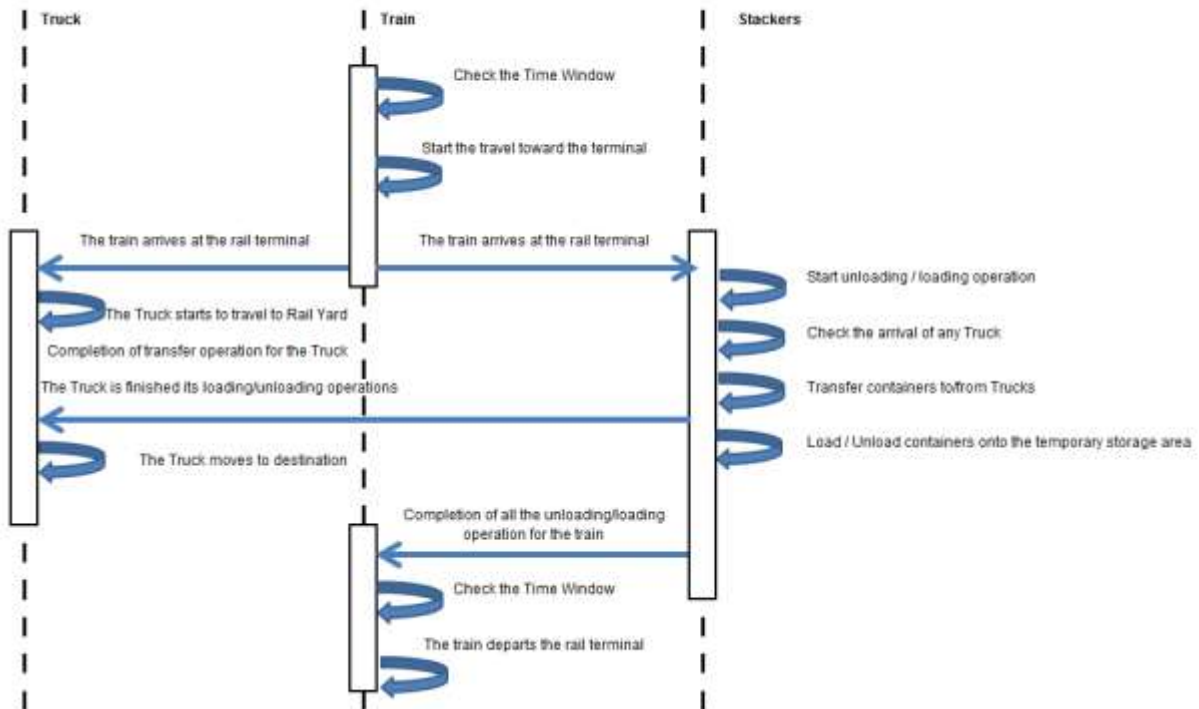

**Load Capacity (kg)**

HYSTER H800HD	36000 kg
HYSTER H800HD	36000 kg
HISTER ReachStacker RS 46-33 IH	46000 kg

**LAYOUTS**

# The Sequence Diagram for Rail Terminal

**TRAIN OPERATION PROCESS**

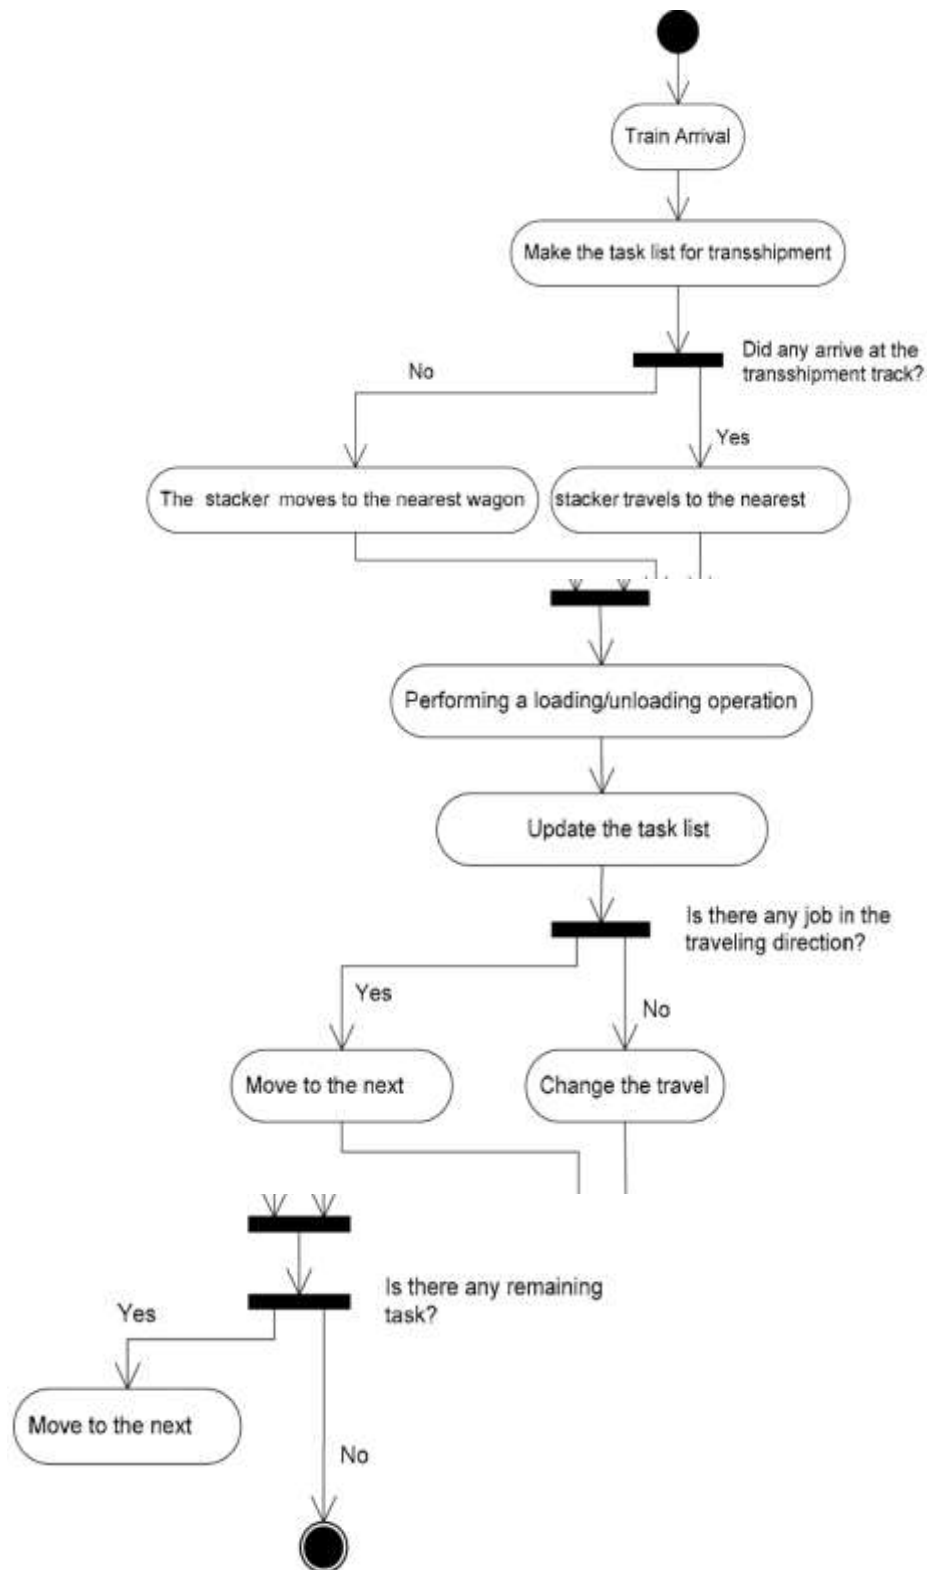

**TRUCK OPERATION PROCESS**

**STACKER OPERATION PROCESS**

<b>Information Related to RFC6</b>		
Number of chapter	Heading text	<b>Gonvarri</b>
	Table of contents	
1	General information	<b>Gonvarri</b>
2	Access conditions	
3	Terminal description	Direct connection with Castellbisbal station through the main private-sidings line shared only with CELSA and Gonvauto. Train sets of 12 cars maximum. Three branch lines 200 metres each, one located inside sheltered warehouses.
4	Capacity allocation	
5	Services	We carry out freight-car loading and unloading. We handle steel coils of up to 35 tons with gantry crane. It is not possible to handle containers. Light-rail motor tractor available for internal shunting Operating 24 hours from Monday to Friday. Possibility of storing coils of steel sheets (capacity is subject to how busy our warehouses are).
6	Charging	

## Grisen

Information Related to RFC6		
Number of chapter	Heading text	Grisen
	Table of contents	
1	General information	<ul style="list-style-type: none"> <li>➤ Name of terminal, address, how to find the terminal Grisen Terminal address: Paseo de la Estación s/n. ## Puerto Seco Azuqueca de Henares, (Azuqueca de Henares – Guadalajara)

<b>Information Related to RFC6</b>		
Number of chapter	Heading text	<b>Puerto Seco Azuqueca de Henares</b>
	Table of contents	
1	General Information	<p>PUERTO SECO AZUQUECA – Railway Intermodal Terminal is a 60.000m<sup>2</sup> private railway terminal with a perfect strategic location, in the area of influence of Madrid, and connected with the principal seaports and highways of Spain.</p>
2	Access conditions	<p>The platform has excellent communications, being settled in an axis between the routes Madrid – Barcelona, Madrid – Valencia and Madrid – France, becoming a gate to access the European market.</p>
3	Terminal description	
4	Capacity allocation	
5	Services	<ul style="list-style-type: none"> <li>➤ Services provided: The main services offered to the different companies established in the platform are:                      Regular maritime services to different Spanish seaports: Barcelona, Bilbao, Valencia, Algeciras, Santander,....                      Regular land services with technical assistance to trains and loadings: cargo consolidation and transport                      Storage services of full and empty containers in warehouses, including cleaning and reparation services                      Customs Service                      Logistic warehouses                      Transport companies installed in the area</li> </ul>
6	Charging	Contact terminal management

## **Brief Summary**

The construction of **Puerto Seco of Azuqueca** was initiated in 1995 and two years after, the Terminal was equipped with electrified railways and cargo railways. In 1998 the offices' building was finished, offering complementary services in customs duty and distribution. Since Year 2000, **Puerto Seco of Azuqueca** has railway connection with two other Logistic Platforms, ZAL Azuqueca A-2, and the Intermodal Logistical Alovera Park. The Terminal extended its infrastructures with new railways, cranes, new container depot, and an industrial warehouse equipped with internal railway system.

The terminal has played a key role in the economic promotion of the area, attracting multinational firms such as Leroy Merlin, Primark, BMW, Volvo, or C&A. The development of the **Puerto Seco of Azuqueca** allows the transport of goods arrived from different seaports to Madrid and permits their storage for a future distribution, without using the congested passenger railway corridors of Madrid.

Gran Europa, who is the largest stakeholder (together to the ports of Barcelona, Bilbao and Santander) develops logistics and industrial parks close to the Puerto Seco Azuqueca. The area surrounding the Puerto Seco Azuqueca is the **main logistics area in Spain**, and within it, international logistics and distribution companies operate their warehouses, from which they give service to the Spanish and Portuguese markets.

## Terminal Intermodal de Monzón, (Monzón de Rio Cinca – Huesca)

Information Related to RFC6		
Number of chapter	Heading text	Terminal Intermodal Monzón (T.I.M.)
	Table of contents	
1	General information	<p>➤ Name of terminal Terminal Intermodal Monzón (T.I.M.). Address: Polígono Industrial La Armentera, 22400 Monzón (Huesca) TIM is located in the northeast of Spain, in Cinca Medio Area (Aragon). The location is between Monzón and Barbastro, in La Armentera Industrial Area and the connections and the communications by road is through A-23 (Zaragoza and Barcelona are connected by this motorway). There are other links through N-240 or A-130.</p>   <p>It is position is strategic because is in a central situation respect to other logistics interlocutors: ports (Barcelona and Bilbao), terminals (TMZ, Plaza, Industrial Areas (PLHUS, Platea, etc.). TIM belongs to Samca Group and it is participated in 10% by Logirail (Renfe). TIM's workers together with Logirail manage the terminal: entrances and departures of trains and movements of containers at the terminal (loading and</p>

		downloading).
2	Access conditions	<ul style="list-style-type: none"> <li>➤ Process description The access conditions are opened for all market body. The terminal offers a public vocation and everybody can operate at the terminal under special conditions. We require to set a contract and some insurances depending on the activity of the interlocutor. Currently we have a contract with RENFE and we consider all points (rights and responsibilities).</li> <li>➤ Technical conditions up to now we use or move continental containers, mainly 20' and 40' standard BOX Container, but we also move 30', HC 40', etc.... In the short term (Q4 2013 Q1 2014), we hope to use ISO-containers for the transport of liquids. The terminal gets an area ready for this kind of transport units. The length of trains is around 530 meters. Its composition is 21 platforms 60'. Every platform allows a maximum weight of 60 MT.</li> </ul>
3	Terminal description	<ul style="list-style-type: none"> <li>➤ Number and length of tracks Number of main tracks: 2 TIM has a third auxiliary truck (used for particular movements, cuts of platforms, separating broken platforms, etc.). The length of this tracks is around 300 meters. Length of main tracks: 540 meters.</li> <li>➤ Storing capacity 32.000 m2.</li> <li>➤ Connection to main railway infrastructure. Currently TIM receive trains from Barcelona port and Bilbao port. Since its beginnings (two years ago), the direct connection has been through Barcelona Port but during this year we have opened other route from Bilbao Port. Though Barcelona, we have five trains per week (one unit per day), but in some periods during the year, the volume has increased till seven-nine trains per week. Though Bilbao, the current movement is two-three trains per month. We think this way will be more important in the future. At the moment, we work with two operators (they manage and contract the trains): 1.- MSC · this shipping line move their containers from BEST terminal or TERCAT terminal (Barcelona) to TIM. They operate with three trains weekly. MSC only moves their own containers Besides, they move the trains from Bilbao. 2.- TCB Railway · this operator moves container from TCB terminal in Barcelona Port to TIM. This logistic figure</li> </ul>

		<p>moves containers of several shipping lines ( Maersk, CMA, Hapag Lloyd, Hamburg Sud, etc.). We receive two trains per week from this operator.</p> <p>Barcelona timetable:          Tuesday – Thursday - Friday: MSC Monday – Wednesday: TCB Railway          The trains always arrive to TIM at 5:30 pm and leave at 7:30 pm (two hours later).</p> <p>➤ Technical map of terminal</p> 
4	Capacity allocation	<p>➤ Process description</p> <p>Every operator sends us the information previously to the arrival of train by email.</p> <p>We receive a report where we can see the composition of the trains and how many containers go in every platform, the number of containers, the name of containers, their dimensions (20' or 40').</p> <p>Furthermore, if there is a special import, for example a container with dangerous material, we know exactly their location inside the train.</p>
5	Services	<p>➤ Services provided</p> <p>TIM offers different services</p> <p>Movements of containers (loading, downloading from train or truck).</p> <p>Storage</p> <p>Cleaning containers</p> <p>Movements of trains: our people have some authorizations, and they can move trains of other public and private terminals.</p>
6	Charging	<p>➤ Price List:</p> <p>28,8 € / movement.</p> <p>42 € / cleaning containers.</p> <p>Storage: depends on the volume and the period.</p> <p>Works in other terminals: depends on the particular activity.</p>

## Terminal Marítima Zaragoza S.L., (Corbera Alta – Zaragoza)

Information Related to RFC6		
Number of chapter	Heading text	Terminal Marítima Zaragoza
	Table of contents	
1	General information	<p>➤ Name of terminal Terminal Marítima de Zaragoza S.L, Ctra Cogullada, 65 Parcela 17, Mercazaragoza, Zaragoza, Spain. TmZ is located in Mercazaragoza´s logistics area, it is just 2 km away from the A2 highway which connects Madrid with Barcelona throughout Zaragoza. Also connected with Valencia through A23, and the highway which connects us with Bilbao AP7. In addition to this tmZ has its own railway connection to the General railway track Madrid-Barcelona TmZ and the Zaragoza´s railway hub are a key point on the RFC 6 Corridor. Both to capture loads from the Ebro Valley to the Mediterranean ports but also to develop the Mediterranean axis throughout Zaragoza and Madrid. Terminal marítima de Zaragoza S.L is a public-private entity. The main stockholders are the following: (56%) Mercazaragoza S.A. Carretera de Cogullada nº 65, 50014 Zaragoza, España. Tlfn+34976464180 (21%) Autoridad Portuaria de Barcelona. WTC Barcelona, edifici Est. Moll de Barcelona, s/n. 08039 Barcelona. España. Tfn +34 93.306.64.45 20%) Diputación General de Aragón. Edificio Pignatelli. Pº María Agustín, 36. 50071. Tfn+ 976 714 000 And privately, a local bank and two local private corporations The following Company under concession and in charge of the internal and operative process is: Depot tmZ. Services.S.L. Ctra Cogullada, 65 Parcela 17, Mercazaragoza, Zaragoza, España. Tlfn: +34 976 464438. Attending to its inner general functions tmZ might be considered as an intermodal terminal (track/railway/vessel) According to the Company´s statutes, providing logistic services and containers handling are the main goals of this company. Any interested customer is welcome to join work in tmZ facilities.</p>
2	Access conditions	<p>➤ The use of the terminal is clearly open to all interested players as (forwarders, Shipping companies, Railway</p>

		<p>Operators, etc)</p> <ul style="list-style-type: none"> <li>➤ The terms and conditions about work within the terminal must be taken by both parts, but is tmZ. Services which can decline or not the choice of working at the Company.</li> <li>➤ Legal requirements: must be taken by both parts.</li> <li>➤ Technical conditions There is just one technical restriction. We only operate with ISO Containers. 20'', 40'', 40'' high, dry, open top, tank container The maximum train length is 750 meters The maximum weight is 25 Tons by container</li> </ul>
3	Terminal description	<ul style="list-style-type: none"> <li>➤ Number and length of railway trucks Track 0, 570 meter; Track 1,680 meter; Track 2, 600 meter; Track 3, 750 meter; Track 4,590 meter; Track 5,750 meter. Track 7, 300meter</li> <li>➤ Storage Capacity The tmZ storage capacity is about 2800 Teus. The container yard has more than 15.000m2 TmZ is equipped with 3 Reach Stacker-style mobile cranes Reach Stacker, Linde Model 45 Tons. With the 3 Reach Stacker cranes, the maximum operative capacity, the terminal is able to reach up to 120 Mvt/hour. One of the tmZ's most important operative advantages is the double railway access via Barcelona by the south and via Lerida by north.</li> <li>➤ Operating times The terminal is operative open from 7:00 am to 20:00 pm on weekly days. Saturday and Sunday under special conditions The following diagram shows the most representative railway facilities in tmZ:</li> </ul>  <p><b>Red marks:</b> Electrified rail truck <b>Yellow marks:</b> Non electrified rail trucks.</p>
4	Capacity allocation	<ul style="list-style-type: none"> <li>➤ Process description a typical Electronic Data Interchange (EDI) system is used in tmZ for the operational process. We have also developed a customized IT software, mainly for internal processes and for some external communication with</li> </ul>

		<p>customers and providers.</p> <ul style="list-style-type: none"> <li>➤ Booking The booking orders are usually introduced in our IT software. Such orders should include the load and unload order with all specified conditions.</li> </ul> <p>The container identification number, shipping company and road transport must be previously notified. The booking list is received by tmZ from the originating terminal with the essential information (arrival and expedition railway, weekly timing, container features (weight and dimensions)). This container list is automatically sent to the crane operators. With all these previous steps the container is ready to be loaded or unloaded. The most common booking way is by Electronic data interchange. The booking deadline depends from the private contractual conditions. There are common standards but there is no possibility to cancel past two hours before the expected time.</p>
5	Services	<ul style="list-style-type: none"> <li>➤ Services provided Container Logistics Container warehousing for empty and full containers. Storage and handling services. Direct connection with operators and carriers. It offers business solutions. Cargo Logistics. Consolidation and deconsolidation but also complementary services such as classifying and palletizing. Add value services. Cleaning and repairing services. Transport Services Facilitates transport from tmZ to delivery place and from the factory/company to tmZ. We have a unique knowledge about the transport situation in our influence area; tmZ transport agency can provide customized transport services to our customers. Customs Warehousing Allowing our customers for money-saving but also and perhaps the most important to reduce the administrative task which means saving time. Nowadays we are CW (Customs warehouse), TDW (Temporary Depot Warehousing) and currently in process to get the AEO certification.</li> </ul>
6	Charging	<ul style="list-style-type: none"> <li>➤ Prices list: Handling rates according to the ADIF Spanish rates. 22€/movement.</li> <li>➤ Might be modifications with reduction of the economic rates depending on the container quantity</li> <li>➤ Charging conditions would be determined by both parts.</li> </ul>

### Padova Terminal intermodale Interporto

Information Related to RFC6		
Number of chapter	Heading text	<b>Padova Terminal intermodale FS logistica &amp; Padova Terminal intermodale Interporto</b>
	Table of contents	
1	General information	<p>Interporto Padova is an intermodal platform that integrates two transport modes: road and rail.</p> <p>The intermodal area includes about 350,000 square meters of Railway Infrastructure and Terminal. It provides to the logistics and transport operators all the services necessary to the exercise of any combined road – rail traffics, operating 24 hours a day. In these structures, containers, swap bodies and semi-trailers are shifted from trucks to wagons and vice versa. The operations of loading and unloading are carried out with 15 reach stackers (8 for full and 7 for empty units) able to lift containers up to 40 tons. A software efficiently and quickly executed all the handling operations. In addition to the areas of loading and unloading, the terminals have large storage yards for full and empty containers whose depot management will be integrated soon in the management IT system.</p> <p>Interporto Padova Spa manages both the existing Terminals: the “Nuovo Grande Terminal” owned by the company itself and the “Terminal FS Logistica”, thanks to a lease agreement signed with Gruppo Ferrovie dello Stato Italiane (Italian Railways Group).</p> <ul style="list-style-type: none"> <li>➤ Name of terminal, address, how to find the terminal Nuovo Grande Terminal Corso Spagna 14 35127 Padova Terminal FS Logistica Corso Spagna 14 35127 Padova The terminal area is situated in the south side of the Padua Industrial Zone. Very close links to the motorways through the Padova East toll gate on the A4 motorway (Turin – Milan – Venice – Trieste) and the Padova Z.I. – Interporto toll gate on the A13 motorway (Padua – Bologna)</li> <li>➤ Terminal Owner 1- Nuovo Grande Terminal: Interporto Padova Spa Galleria Spagna, 35 35127 Padova Contact: Mr Francesco Bacarini– Sales executive  2- Terminal FS Logistica: FS Logistica Spa</li> </ul>

		<p>Piazza della Croce Rossa, 1 Roma</p> <ul style="list-style-type: none"> <li>➤ Terminal operator Interporto Padova Spa Galleria Spagna, 35 35127 Padova Contact: Mr Giuseppe Lavoradori – Operations manager</li> <li>➤ Terminal Character Intermodal rail/road terminal</li> </ul>
2	Access conditions	<ul style="list-style-type: none"> <li>➤ Open access for all market operators: YES</li> <li>➤ Legal requirements to access: contract, certificates, insurance, and all other documents provided by law</li> <li>➤ Technical conditions: handling of ISO containers/ continental containers/ trailers/swap-bodies/ tanks; max. weight/ length of trains:1600 tons/680 mt shipments: domestic and international; allowed RID classes: all excepted 1.7.6.2 classes</li> </ul>
3a	Terminal description	<ul style="list-style-type: none"> <li>➤ Number and length of tracks 16 tracks from 400 to 700 mt long;</li> <li>➤ Storing capacity 1) 200.000 mq; 2) 70.000 mq</li> <li>➤ Equipment 8 stackers for load containers and 7 stackers for empty units;</li> <li>➤ Equipment capacity 10 nits full cnt/hour; 13 units empty cnt/hour;</li> <li>➤ Connection to main railway infrastructure The site is linked to the railway along a 4 km electrified line that links the Container Terminal and goods station in Padova Interporto with Padova Central Station, which is then linked to the main national and international networks</li> <li>➤ Timetabling for service trains: see Annex 1</li> <li>➤ Technical map of terminal : see Annex 2</li> </ul>
4	Capacity allocation	<ul style="list-style-type: none"> <li>➤ Process description</li> <li>1) pre-booking of CNTR entry/exit (on web for customers connected to our IT platform named "Gestione Deposito" (GD) enabling the depot management;</li> <li>2) gate IN/gate OUT;</li> <li>3) interchange forms issuing;</li> <li>4) rail/road ;</li> </ul> <p>1) pre-booking If CNTR entry by truck, the pre- insertion of the information in GD of identification it must be made, depending on the case :</p>

	<ul style="list-style-type: none"> <li>• directly by the user, when connected in GD ;</li> </ul> <p>By the staff of the gate of Interporto Padova, in the case of users connected to the GD .</p> <p>2) Gate IN</p> <p>The information to be inserted before the arrival of the CNTR are:</p> <p>Information identifying CNTR (number, size , ...);</p> <p>CNTR destination and the seal number ( if load) ;</p> <p>CNTR owner ;</p> <p>identification data carrier (plate, driver , ...).</p> <p>CNTR entry via train</p> <p>If CNTR is arriving by train, the Multimodal operator must inform the staff of the railway office of Interporto Padova of the train departs by sending in their own format , a "Manifest of arrival" containing the combination wagons / containers and information regarding :</p> <p>Information identifying CNTR (code / number , size , ...);</p> <p>CNTR owner ;</p> <p>identification data carrier ( wagon , ...);</p> <p>any billing information .</p> <p>3) CNTR check</p> <p>If the check is positive , " Interchange" form is printed and signed by Gate personnel and consigned to the driver who has to countersigned it. At this point, the truck is allowed to ' entry .</p> <p>In case of CNTR via train , is carried a visual inspection of correspondence between the data of the CNTR / wagons transported compared to the "Manifest of arrival" form.</p> <p>In general, for all the CNTR entry a control should be made for good condition and in case of CNTR loaded, it should be checked the integrity and the correct number of the seal.</p> <p>4) Communication to operators for the load</p> <p>Once confirmed the entry of the CNT , the software automatically sends to the terminal of the crane a message containing :</p> <p>activities to be performed (loading, unloading , ...);</p> <p>Information identifying CNTR ;</p> <p>destination information or useful to the positioning .</p> <p>Unloading and positioning CNTR</p> <p>The unloading of CNTR must be made by the crane operators in relation to the indications given in the message described above , the positioning of CNTR in the yard must be made according to the characteristics of the container :</p> <p>full or empty ;</p> <p>import or export;</p> <p>size and type;</p> <p>destination;</p> <p>any discharge lists for withdrawal in a fixed order ;</p> <p>any other information (ADR , to be fumigated , set aside , ....) .</p> <p>Once positioned the CNTR , the crane operator should confirm the operation carried out successfully, also in the software by inserting the coordinates of the position , at which point the software automatically updates the board CNTR that from this moment will be present in the yard</p> <p>2) Gate OUT</p>
--	--

	<p>a) By road</p> <p>If the CNTR exit is performed by truck</p> <p>(1) The data for incoming trucks for the withdrawal of CNTR must be pre- booking in GD through :</p> <p>pre booking via web for connected user ;</p> <p>Pre booking at gate Interporto for others.</p> <p>Upon arrival of the truck, the staff at the Gate must provide the following controls:</p> <p>corresponding data of truck identification;</p> <p>CNTR data identification( empty and full ) corresponding to Bill of loading of the carrier;</p> <p>presence of CNT in the yard.</p> <p>In case of withdrawal of CNTR empty , the data for the pre CNTR input may be related to a type of CNTR ( size, type, height ) with no indication of the specific number , the staff of the Gate has only to check the correspondence of the data of the owner of the CNTR to be withdrawal, already inserted into the GD in the form of reservation.</p> <p>Once the checks listed above have been successfully performed, the Gate staff informs the crane operator, inserting the data in the GD system , about the plate number of the truck that will carry out the withdrawal . Then, the crane operator who receives the information of the operation to carry out, confirms it on the GD in order to allow the subsequent controls in exit. In case of withdrawal of a specific CNTR , the crane operator must only confirm the operation, in case of withdrawal of a specific type of CNTR , the crane operator must also indicate the CNTR's identification number.</p> <p>When the truck arrives at the gate, the staff must check that:</p> <p>the procedure performed by the crane operator has been completed;</p> <p>The data of the CNTR owner's and CNTR unit coincide with the ones added to GD.</p> <p>If the control is positive, the staff of Gate prints and signs the form " Interchange " which is given to be countersigned to the driver.</p> <p>At this point, the truck is allowed to exit.</p> <p>b) By rail</p> <p>The exit of CNTR via train must firstly be advanced by the "Manifest of departure", which is transmitted to the Multimodal Operator Padua with the ' indication of containers to be loaded.</p> <p>Upon arrival of the wagons to be loaded , the staff of the Railway check the congruency between type and number of wagons and CNTR to load.</p> <p>The crane operator load the CNTR on the wagons following the copy of the Manifest of Departure received from the staff of the Railway office.</p> <p>Upon completion of the loading of the CNT on the train, the railway office staff must:</p> <p>physically check the correspondence of the matching wagons / CNTR to the ones listed in the manifest of departure;</p> <p>check that the CNTR have been loaded properly according to the safety standards (e.g exact positioning of the corner blocks on the respective twist and proper closing of the doors of the loaded CNTR ) ;</p>
--	---

		<p>confirm, by sending copy of the Manifest of departure both to the Multimodal Operator and to the local office of Italian Railways ( RFI ) that the loading of the train has been completed; register the exit of the CNTRs by entering the operation in the software Gestione Deposito, noting the identification code of the train and the number of the respective wagon .</p> <ul style="list-style-type: none"> <li>➤ Booking forms, cancellation conditions, special requirements all these conditions depend on MTO's indications referred to its trains.</li> </ul>
